DECISION SUMMARY

Strong pursue. This is a fully funded, exec-sponsored, RFP-issued, full-cycle Oracle Fusion Cloud replacement (Banner → Oracle Financials/SCM/HCM/EPM) at a — squarely on the firm's Oracle Cloud premier alliance, with a hard proposal deadline of July 24, 2025 and a mid-October 2025 kick-off. The scope is large, complex, and well-defined; the only material flags are the onshore-only staffing constraint, the big-bang deployment risk on a 24-month timeline across this breadth of modules, and the absence of a confirmed go-live date (and therefore a confirmed fixed-fee anchor).

DEAL SHAPE

Full-cycle Oracle Fusion Cloud implementation across four methodology phases: (1) Planning — COA redesign, OCM workstream stand-up, integration architecture, data migration strategy, ~2–3 months; (2) Analyze & Design — process design across Financials, SCM, HCM, EPM, Grants, Projects, Epic integration blueprinting, ~4–5 months; (3) Build & Test — configuration, OIC integration build (Epic HL7/inventory, Anso's, DocuSign, 13 punchouts, OAC/FDI), data migration (790 GB Banner), test automation, UAT, cutover planning, ~10–12 months; (4) Implement & Support — big-bang cutover with parallel Banner run (min. 6 months), 90-day hypercare, decommissioning support, ~6+ months. Estimated term: ~24 months implementation + 90-day hypercare + optional post-hypercare managed support (bid separately). Size band: large enterprise program — likely \$8M–\$15M+ fixed-fee services engagement given module breadth, onshore-only constraint, data complexity, and hypercare requirements. Commercial structure: fixed-fee with milestone billing, detailed hourly-rate and task-level breakdown required; diverse/local supplier subcontracting target of 15% of contract value.

RANKED SERVICE-LINE CANDIDATES

0.98	technology-implementation	The opportunity is a full Oracle Fusion Cloud ERP implementation (Finance, SCM, HCM, EPM, OAC) replacing legacy Banner, Jaggaer, and iCIMS systems — a textbook end-to-end ERP system selection, build, and go-live engagement with integrations, data migration, OCM, and post-go-live hyper-care support.
0.07	audit-advisory	Chart of Accounts redesign and decommissioning/data archival strategy have minor advisory elements, but these are incidental to the core implementation scope and not a standalone advisory engagement.

FIT

82/100 (strong)

ROUTING

delivery / proposal team · Routed to delivery / proposal team: technology-implementation / implementation (line 0.98, engagement 0.99), fit 82/strong.
